

CLAIMS

What is claimed is:

1. A method of enhancing the adhesion of a compound to a surface of a substrate comprising:
providing said substrate having said surface; and
roughening the surface of the substrate.
2. The method according to claim 1, wherein said roughening comprises removing contamination and foreign particles from said surface of the substrate.
3. A method of enhancing the adhesion of a material to a surface of a substrate comprising:
providing said substrate having said surface; and
roughening the surface of the substrate.
4. The method according to claim 3, wherein said roughening comprises removing contamination and foreign particles from said surface of the substrate.
5. A method for improving adhesion of a compound to a surface of a substrate comprising:
providing said substrate having said surface; and
roughening the surface of the substrate.
6. The method according to claim 5, wherein said roughening comprises removing contamination and foreign particles from said surface of the substrate.
